Hydronic Systems

Systèmes Hydroniques

Is a hydronic towel warmer right for me?

A hydronic towel warmer may be suited to your home if:

- You have a boiler system
- You are able to install the towel warmer(s) on a closed loop
- The loop incorporates an anti-rust inhibitor
- The loop operates at approximately 160°F/70°C (+/- 10%)

If all these conditions apply, then a hydronic Tuzio towel warmer will fit perfectly into your home!

Un chauffe-serviettes hydronique me convient-il?

Un chauffe-serviettes hydronique peut convenir à votre foyer si:

- Vous avez un système de chauffage à chaudière
- Vous êtes capable d'installer le chauffe-serviettes sur un circuit fermé
- Le circuit incorpore un inhibiteur de rouille
- Le circuit fonctionne à environ 160°F/70°C (+/- 10%)

Si toutes ces conditions s'appliquent, alors un chauffe-serviettes hydronique Tuzio s'adaptera parfaitement à votre foyer!

What will I need to install my hydronic towel warmer?

You'll need 3 pieces for successful installation:

- Hydronic towel warmer: all product codes begin with H for hydronic models
- A set of valves: either a floor set, or wall set depending on the location of your feed pipes
- An installation pack: the standard 24" installation pack can be cut to size and works with all ICO valves

Please note, if you've selected a Traditional Tuzio towel warmer (see pages 52-53), then you'll require a traditional gate valve.

De quoi aurai-je besoin pour installer mon chauffe-serviettes hydronique?

Vous aurez besoin de 3 pièces pour une installation réussie :

- Un chauffe-serviettes hydronique : tous les codes de produit commencent par H pour les modèles hydroniques
- Un jeu de robinets: soit un jeu pour plancher, soit un jeu pour mur selon l'emplacement de vos tuyaux d'alimentation
- Une trousse d'installation : la trousse d'installation standard de 24 po peut être coupée à la taille désirée et fonctionne avec toutes le robinets ICO

Veuillez noter que si vous avez sélectionné un chauffe-serviettes Tuzio traditionnel (voir pages 52 à 53), vous aurez besoin d'un robinet-vanne traditionnel.

Features

The ICO LED mirrors difference
La différence des miroirs LED de ICO

What is Kelvin Color Temperature?
Qu'est-ce que la température de couleur Kelvin?

The Kelvin (K) scale measures the color temperature of light sources, including LEDs. Color temperature refers to the perceived warmth or coolness of light emitted by a source, and it is measured in units of Kelvin (K). It can vary depending on personal preference, the intended use of the space, and the desired ambiance.

Compared to others with preset or fixed color options, ICO LED Mirrors stepless color adjustment (from 2700K - 6500K) provides users with greater control, flexibility, and versatility, allowing for a more personalized and adaptable lighting experience.

L'échelle Kelvin (K) mesure la température de couleur des sources lumineuses, y compris les LED. La température de couleur fait référence à la chaleur ou à la froideur perçue de la lumière émise par une source, et elle est mesurée en unités de Kelvin (K). Elle peut varier en fonction des préférences personnelles, de l'utilisation prévue de l'espace et de l'ambiance souhaitée.

Par rapport à d'autres miroirs dont les options de couleur sont prédéfinies ou fixes, le réglage progressif de la couleur (de 2700K à 6500K) offre aux utilisateurs un plus grand contrôle, une plus grande flexibilité et une plus grande polyvalence, ce qui permet une expérience d'éclairage plus personnalisée et plus adaptable.

Benefits of CRI 90+ R9>50
Avantages de CRI 90+ R9>50

Color Rendering Index (CRI) measures how natural colors render under an artificial white light source like LED's when compared with sunlight.

A CRI of 90+ on LED light source denotes very high color accuracy and better color differentiation, while an R9>50 means better skin tone rendering which are highly essential for makeup application or face grooming. It also provides better visual comfort as it closely mimics natural daylight, reducing eye strain and fatigue.

L'indice de rendu des couleurs (IRC) mesure le rendu des couleurs naturelles sous une source de lumière blanche artificielle, comme les LED, par rapport à la lumière du soleil.

Un IRC de 90+ sur la source lumineuse LED indique une très grande précision des couleurs et une meilleure différenciation des couleurs, tandis qu'un R9>50 signifie un meilleur rendu du teint de la peau, ce qui est essentiel pour l'application du maquillage ou le toilettage du visage. Elle offre également un meilleur confort visuel car elle reproduit fidèlement la lumière du jour, réduisant ainsi la fatigue oculaire.
